Proper Citation: MGH Martinos Center for Biomedical Imaging Core Facility (RRID:SCR_012324)

Description: Core facility that provides the following services: Positron emission tomography service.

The Martinos Center's dual mission includes translational research and technology development. The core technologies being developed and used at the center are magnetic resonance imaging (MRI) and spectroscopy (MRS), magnetoencephalography (MEG) and electroencephalography (EEG), near infra-red spectroscopy (NIRS) and diffuse optical tomography (DOT), Positron Emission Tomography (PET), electrophysiology, molecular imaging, and computational image analysis. A particular area of innovation at the Center is Multimodal Functional Neuroimaging which involves the integration of imaging technologies. They are also world leaders in the development of primate neuroimaging techniques. Major areas of research at the center include, psychiatric, neurologic and neurovascular disorders, basic and cognitive neuroscience, cardiovascular disease, cancer and more. With an extensive and expanding inventory of state-of-the-art imaging facilities, a world class team of investigators and collaborators, and important government, industry and private supporters, the Martinos Center is leading the way to new advances and applications in biomedical imaging.

Abbreviations: MGH Martinos Center for Biomedical Imaging Core Facility

Synonyms: Massachusetts General Hospital Martinos Center for Biomedical Imaging Core Facility

Resource Type: access service resource, core facility, service resource

Keywords: positron emission tomography

Resource Name: MGH Martinos Center for Biomedical Imaging Core Facility

Resource ID: SCR_012324

Alternate IDs: SciEx_11748
