Proper Citation: Clinical Trials Registry - India (RRID:SCR_000679)

Description: Free, online public record system for registration of clinical trials being conducted in India. Initiated as a voluntary measure, trial registration in the CTRI has been made mandatory by the Drugs Controller General (India) (DCGI) (<http://www.cdsc.nic.in/>). Moreover, Editors of Biomedical Journals of 11 major journals of India declared that only registered trials would be considered for publication. Today, any researcher who plans to conduct a trial involving human participants, of any intervention such as drugs, surgical procedures, preventive measures, lifestyle modifications, devices, educational or behavioral treatment, rehabilitation strategies as well as trials being conducted in the purview of the Department of AYUSH (<http://indianmedicine.nic.in/>) is expected to register the trial in the CTRI before enrollment of the first participant. Trial registration involves public declaration and identification of trial investigators, sponsors, interventions, patient population etc before the enrollment of the first patient. Submission of Ethics approval and DCGI approval (if applicable) is essential for trial registration in the CTRI. Multi-country trials, where India is a participating country, which have been registered in an international registry, are also expected to be registered in the CTRI. In the CTRI, details of Indian investigators, trial sites, Indian target sample size and date of enrollment are captured. After a trial is registered, trialists are expected to regularly update the trial status or other aspects as the case may be. After a trial is registered, all updates and changes will be recorded and available for public display. The CTRI is working with the WHO ICTRP to ensure that results of all trials registered with the CTRI are adequately reported and publicly available.

Abbreviations: CTRI

Synonyms: Clinical Trials Registry-India (CTRI), Clinical Trials Registry-India, Clinical Trials Registry - India (CTRI)

Resource Type: data repository, data or information resource, database, storage service resource, clinical trial, service resource

Defining Citation: [PMID:18630235](#)

Keywords: clinical trial, registry, registration, trial, clinical, randomized, non-randomized, india

Availability: THIS RESOURCE IS NO LONGER IN SERVICE

Resource Name: Clinical Trials Registry - India
