Proper Citation: SPOT - Biological prioritization after a SNP association study (RRID:SCR_005193)

Description: A web-based tool for using biological databases to prioritize single nucleotide polymorphisms (SNPs) after a genome-wide association study (GWAS). The site allows users to upload a list of SNPs and GWAS P-values and returns a prioritized list of SNPs using the GIN method. Users can specify candidate genes or genomic regions with custom levels of prioritization. The results can be downloaded or viewed in the browser where users can interactively explore the details of each SNP, including graphical representations of the genomic information network (GIN) method. For investigators interested in incorporating biological databases into a post-GWAS SNP selection strategy, the SPOT web tool is an easily implemented and flexible solution.

Abbreviations: SPOT

Resource Type: data analysis service, service resource, analysis service resource, production service resource

Defining Citation: [PMID:20529875](#)

Keywords: single nucleotide polymorphism, genome-wide association study, linkage disequilibrium, gene, genomic region, p-value, bio.tools, FASEB list

Resource Name: SPOT - Biological prioritization after a SNP association study

Resource ID: SCR_005193

Alternate IDs: biotools:spot, OMICS_00189

Alternate URLs: <https://bio.tools/spot>

Record Creation Time: 20220129T080228+0000

Record Last Update: 20260804T043248+0000

Ratings and Alerts

No rating or validation information has been found for SPOT - Biological prioritization after a SNP association study.

No alerts have been found for SPOT - Biological prioritization after a SNP association study.
