Proper Citation: ScienceBlogs (RRID:SCR_005197)

Description: From climate change to intelligent design, HIV/AIDS to stem cells, science education to space exploration, science is figuring prominently in our discussions of politics, religion, philosophy, business and the arts. New insights and discoveries in neuroscience, theoretical physics and genetics are revolutionizing our understanding of who are are, where we come from and where we're heading. Launched in January 2006, ScienceBlogs is a portal to this global dialogue, a digital science salon featuring the leading bloggers from a wide array of scientific disciplines. Today, ScienceBlogs is the largest online community dedicated to science. We believe in providing our bloggers with the freedom to exercise their own editorial and creative instincts. We do not edit their work and we do not tell them what to write about. We have selected our 80+ bloggers based on their originality, insight, talent, and dedication and how we think they would contribute to the discussion at ScienceBlogs. Our role, as we see it, is to create and continue to improve this forum for discussion, and to ensure that the rich dialogue that takes place at ScienceBlogs resonates outside the blogosphere. ScienceBlogs is always interested in bringing new contributors into our community. If you're interested in blogging with us, please fill out our application, and we'll be in touch.

Abbreviations: Sb

Resource Type: narrative resource, data or information resource, database, blog

Keywords: science, life science, physical science, environment, humanities, education, politics, medicine, brain, behavior, technology, information science, job, peer review

Resource Name: ScienceBlogs
