Proper Citation: EPILAB (RRID:SCR_009573)

Description: A Matlab-based software package developed for supporting researchers in performing studies on the prediction of epileptic seizures. It provides an intuitive and convenient graphical user interface. Fundamental concepts that are crucial for epileptic seizure prediction studies were implemented. This includes, for example, the development and statistical validation of prediction methodologies in long-term continuous recordings. Seizure prediction is usually based on electroencephalography (EEG) and electrocardiography (ECG) signals. EPILAB is able to process both EEG and ECG data stored in different formats. More than 35 time and frequency domain measures (features) can be extracted based on univariate and multivariate data analysis. These features can be post-processed and used for prediction purposes. The predictions may be conducted based on optimized thresholds or by applying classifications methods such as artificial neural networks, cellular neuronal networks, and support vector machines.

Abbreviations: EPILAB

Synonyms: EPILAB Software

Resource Type: data processing software, software application, software resource

Defining Citation: [PMID:21763347](#)

Keywords: eeg, meg, electrocorticography, seizure, prediction

Related Condition: Epilepsy

Availability: GNU General Public License

Resource Name: EPILAB

Resource ID: SCR_009573

Alternate IDs: nlx_155752

Alternate URLs: <http://www.nitrc.org/projects/epilab>

Record Creation Time: 20220129T080253+0000

Record Last Update: 20260805T044224+0000

Ratings and Alerts

No rating or validation information has been found for EPILAB.

No alerts have been found for EPILAB.
