Description: Web user interface for interaction predictions of human gene networks and integrative analysis of user data types that takes advantage of data from diverse tissue and cell-lineage origins. Predicts presence of functional association and interaction type among human genes or its protein products on whole genome scale. Used to analyze experimental gene in context of interaction networks.

Resource Type: data analysis service, analysis service resource, web service, software resource, data access protocol, production service resource, service resource

Defining Citation: [PMID:25431329](#)
