Proper Citation: RRID:WB-STRAIN:WBStrain00038378

Description: Caenorhabditis elegans with name Whole-genome sequenced strain. from WB.

Species: Caenorhabditis elegans

Synonyms: Whole-genome sequenced strain.

Notes: Made_by: Vancouver KO Group|"Million Mutation Project strain. This strain was isolated after EMS mutagenesis of VC2010, propagated clonally through F10 to drive mutations to homozygosity, and subjected to whole-genome sequencing. It is homozygous for a large number of mutations determined from sequence data. It may also carry large copy number variations that are not homozygous. Alleles numbered between gk100000 and gk962522 are homozygous; those numbered from gk962523 up should be assumed to be non-homozygous. A graphical representation of these large copy number differences can be seen in the Plot section for each strain on the MMP web site (URL: genome.sfu.ca/mmp/).|"Supplementary_genotype che-11(gk248920); (R1105K)"|"This strain was provided by the C. elegans Reverse Genetics Core Facility at the University of British Columbia, which is part of the international C. elegans Gene Knockout Consortium, which should be acknowledged in any publications resulting from its use."

Catalog Number: WB-STRAIN:WBStrain00038378

Database: WormBase (WB)

Database Abbreviation: WB

Availability: available

Source References: [PMID:37933433](#)

Alternate IDs: WB-STRAIN:VC20444, CGC_VC20444

Organism Name: VC20444

Record Creation Time: 20230227T013708+0000

Record Last Update: 20260808T171543+0000

Ratings and Alerts

No rating or validation information has been found for VC20444.

No alerts have been found for VC20444.
