Description: Software for automated anatomical labeling of activations in SPM (Statistical Parametric Mapping) using a macroscopic anatomical parcellation of the MNI MRI single-subject brain. The software was used for an automated anatomical parcellation of the spatially normalized single-subject high-resolution T1 volume provided by the Montreal Neurological Institute (MNI) (D. L. Collins et al., 1998, Trans. Med. Imag. 17, 463468, PubMed). Using this parcellation method, three procedures to perform the automated anatomical labeling of functional studies were proposed: (1) labeling of an extremum defined by a set of coordinates, (2) percentage of voxels belonging to each of the anatomical volumes of interest (AVOI) intersected by a sphere centered by a set of coordinates, and (3) percentage of voxels belonging to each of the AVOI intersected by an activated cluster. An interface with the Statistical Parametric Mapping package is provided as a freeware to researchers of the neuroimaging community.

Abbreviations: AAL

Synonyms: Automated Anatomical Labeling

Resource Type: data processing software, image analysis software, software application, software resource

Defining Citation: [PMID:11771995](#)

Keywords: neuroimaging, mri, labeling, activation foci, parcellation, statistical parametric mapping

Availability: Free

Resource Name: AAL

Resource ID: SCR_003550

Alternate IDs: nlx_157677

Record Creation Time: 20220129T080219+0000

Record Last Update: 20260905T133039+0000

Ratings and Alerts

No rating or validation information has been found for AAL.
