Proper Citation: NIH Toolbox Flanker Inhibitory Control and Attention Test (RRID:SCR_003617)

Description: Assessment test that measures both a participant's attention and inhibitory control. The test requires the participant to focus on a given stimulus while inhibiting attention to stimuli (fish for ages 3-7 or arrows for ages 8-85) flanking it. Sometimes the middle stimulus is pointing in the same direction as the flankers (congruent) and sometimes in the opposite direction (incongruent). Scoring is based on a combination of accuracy and reaction time, and the test takes approximately 3 minutes to administer. This test is recommended for ages 3-85.

Abbreviations: Flanker task

Synonyms: Flanker Inhibitory Control and Attention Test

Resource Type: assessment test provider, material resource

Keywords: cognition, attention, executive function, inhibitory control

Resource Name: NIH Toolbox Flanker Inhibitory Control and Attention Test

Resource ID: SCR_003617

Alternate IDs: nlx_157770

Record Creation Time: 20220129T080220+0000
