Proper Citation: SCAN (RRID:SCR_005185)

Description: THIS RESOURCE IS NO LONGER IN SERVICE. Documented on March 17, 2022. A large-scale database of genetics and genomics data associated to a web-interface and a set of methods and algorithms that can be used for mining the data in it. The database contains two categories of single nucleotide polymorphism (SNP) annotations: # Physical-based annotation where SNPs are categorized according to their position relative to genes (intronic, inter-genic, etc.) and according to linkage disequilibrium (LD) patterns (an inter-genic SNP can be annotated to a gene if it is in LD with variation in the gene). # Functional annotation where SNPs are classified according to their effects on expression levels, i.e. whether they are expression quantitative trait loci (eQTLs) for that gene. SCAN can be utilized in several ways including: (i) queries of the SNP and gene databases; (ii) analysis using the attached tools and algorithms; (iii) downloading files with SNP annotation for various GWA platforms. . eQTL files and reported GWAS from NHGRI may be downloaded., THIS RESOURCE IS NO LONGER IN SERVICE. Documented on September 16,2025.

Abbreviations: SCAN

Synonyms: SCAN: SNP and CNV Annotation Database, SCAN - SNP and CNV Annotation Database

Resource Type: data or information resource, database

Defining Citation: [PMID:25818895](#)

Keywords: single nucleotide polymorphism, copy number variation, annotation, genetics, genomics, genome-wide association study, gene, linkage disequilibrium, function, expression quantitative trait loci, expression, quantitative trait loci, chromosome, chromosome region, affymetrix, cerebellum, parietal, liver
