Proper Citation: Traumatic Brain Injury Model Systems National Data and Statistical Center (RRID:SCR_006736)

Description: The Traumatic Brain Injury Model Systems National Data and Statistical Center (TBINDSC) located at Craig Hospital in Englewood, Colorado, is a central resource for researchers and data collectors within the Traumatic Brain Injury Model Systems (TBIMS) program. The primary purpose of the TBINDSC is to advance medical rehabilitation by increasing the rigor and efficiency of scientific efforts to longitudinally assess the experience of individuals with traumatic brain injury (TBI). The TBINDSC provides technical assistance, training, and methodological consultation to 16 TBIMS centers as they collect and analyze longitudinal data from people with TBI in their communities, and as they conduct research toward evidence-based TBI rehabilitation interventions. The project design includes * The first prospective, longitudinal multi-center study ever conducted which examines the course of recovery and outcomes following the delivery of a coordinated system of acute neurotrauma and inpatient rehabilitation. * Includes large scale follow-up to 20 years post-injury. Available from this site are links to the TBIMS Presentation and TBIMS Update, which has information about the individual model systems and descriptions of the injury and followup data that are being collected. 2007-2012 Project Priorities * Improved long-term outcomes of individuals with TBI by conducting 1-2 site-specific research projects to test innovative approaches that contribute to rehabilitation interventions and evaluating TBI outcomes in accordance with the focus areas identified in NIDRR's Long-Range Plan. * Improved outcomes for individuals with TBI by participating in at least one collaborative research module project, which may range from pilot research to more extensive studies. * Continued assessment of long-term outcomes of TBI by enrolling at least 35 subjects per year into the longitudinal portion of the TBIMS database. * In carrying out research activities, each Center may select from the following research domains: Health and Function, Employment, Participation and

Community Living, and Technology for Access and Function. In addition, each Center must: * Provide a multidisciplinary system of rehabilitation care specifically designed to meet the needs of individuals with TBI. The system must encompass a continuum of care, including emergency medical services, acute care services, acute medical rehabilitation services, and post-acute services; and * Coordinate with the NIDRR funded Model Systems Knowledge Translation Center to provide scientific results and information for dissemination to clinical and consumer audiences.

Abbreviations: TBINDSC

Resource Type: data or information resource, portal, topical portal

Keywords: traumatic brain injury, rehabilitation, intervention, longitudinal, one mind tbi resource

Funding: National Institute on Disability and Rehabilitation Research

Resource Name: Traumatic Brain Injury Model Systems National Data and Statistical Center

Resource ID: SCR_006736

Alternate IDs: nlx_143874

Record Creation Time: 20220129T080237+0000

Record Last Update: 20260912T195644+0000

Ratings and Alerts

No rating or validation information has been found for Traumatic Brain Injury Model Systems National Data and Statistical Center.

No alerts have been found for Traumatic Brain Injury Model Systems National Data and Statistical Center.
