Proper Citation: St. Louis University Medical School Pharmacology and Physiology (RRID:SCR_007475)

Description: The Department of Pharmacological and Physiological Science is a major participant in the current excitement involving research in modern biomedical science. The faculty in the department have diversified backgrounds in the fields of biochemistry, medicine, molecular biology, neuroscience, pharmacology and physiology. A common theme involves the physiology, pathophysiology and pharmacology of intracellular and intercellular communication. Major areas of specialization include: neurotransmitter biochemistry, physiology and pharmacology; molecular biology, biochemistry and pharmacology of neurotransmitter, autacoid, neurohumoral and hormone receptors; intracellular signaling and transduction mechanisms; electrophysiology and ion channels; neurochemistry; cardiovascular and circulatory control mechanisms; regulation and function of the autonomic, somatic and central nervous systems; molecular, cellular and endocrine control mechanisms; respiratory physiology; neuropharmacology and drugs of abuse. Modern research in pharmacological and physiological science applies the experimental methods derived from disciplines that range from clinical medicine to biophysics, biochemistry and molecular biology to provide a detailed understanding of drug action and physiological function at many different levels of inquiry.
