**Description:** Facility is small molecule and functional genomics high-throughput screening laboratory. It is built around modular work stations and most assays are performed in 384-well plates. There are over 500,000 small molecules available for screening at ICCB-Longwood and compound collection is continuously growing. Whole human and mouse genome siRNA libraries, arrayed sgRNA libraries, lncRNA siRNA libraries, as well as miRNA mimic and inhibitor libraries, are also available for screening. These libraries can be screened at the genome level or in focused subsets.
