Proper Citation: Memorial Sloan Kettering Cancer Center Research Pharmacy Core Facility (RRID:SCR_027807)

Description: Core is a full-service facility that prepares agents developed by MSK researchers to be used as investigational drugs in preclinical or clinical studies. The Core comprises three principal groups: the Pharmaceutical Product Facility (PPF) for drug formulation/stability and preparation; the Clinical Grade Production (CGP) Facility for bulk product manufacturing, purification, and vialing; and the Pharmacy Investigational Drug Service (PIDS), which develops, procures, prepares, and validates the preparation, packaging, and distribution of investigational drugs for clinical use. Core services include: formulation, analysis, and evaluation of drug release rates; prediction of interactions; and determinations of compatibility and physical stability of medications. Based on the expertise of the RP Core, MSK has been able to bring into early-phase clinical trials multiple types of pharmacologic agents, including traditional small molecules, radiopharmaceuticals, and vaccines.

Resource Type: access service resource, core facility, service resource

Keywords: ABRF, investigational drugs, preclinical or clinical studies, formulation, analysis, evaluation of drug release rates, prediction of interactions, determinations of compatibility and physical stability of medications,
