## hiPathDB - human integrated Pathway DB with facile visualization

RRID:SCR\_008900

Type: Tool

### Proper Citation

hiPathDB - human integrated Pathway DB with facile visualization (RRID:SCR\_008900)

### Resource Information

**URL:** <http://hipathdb.kobic.re.kr/>

**Proper Citation:** hiPathDB - human integrated Pathway DB with facile visualization (RRID:SCR\_008900)

**Description:** hiPathDB is an integrated pathway database that combines the curated human pathway data of NCI-Nature PID, Reactome, BioCarta and KEGG. In total, it includes 1661 pathways consisting of 8976 distinct physical entities. (2010.03.09) hiPathDB provides two different types of integration. The pathway-level integration, conceptually a simple collection of individual pathways, was achieved by devising an elaborate model that takes distinct features of four databases into account and subsequently reformatting all pathways in accordance with our model. The entity-level integration creates a single unified pathway that encompasses all pathways by merging common components. Even though the detailed molecular-level information such as complex formation or post-translational modifications tends to be lost, such integration makes it possible to investigate signaling network over the entire pathways and allows identification of pathway cross-talks. Another strong merit of hiPathDB is the built-in pathway visualization module that supports explorative studies of complex networks in an interactive fashion. The layout algorithm is optimized for virtually automatic visualization of the pathways.

**Abbreviations:** hiPathDB

**Synonyms:** Human Integrated Pathway Database

**Resource Type:** data or information resource, database

**Defining Citation:** [PMID:22123737](#)

**Keywords:** pathway, gene, compound, interaction, bio.tools

**Funding:** Ewha Womans University; Seoul; Korea ;
