Description: A national research institute focusing on chemical, biochemical and pharmaceutical process development. Their main task is to build, use and provide expertise to increase success rates for academic and industrial actors with the development of new products and production processes. The institute forms an important resource and competence platform for knowledge generation, knowledge transfer, concept testing and risk sharing. Via SP Process Development, researchers and small and medium- sized enterprises (SMEs) are provided access to tools, technology, equipment and complementing specialist knowledge. Sections that constitute the institute: * Analysis and Solid State * Catalysis * Process Development and Crystallization * Substance and Formulation What they do * Bringing together academia and industry to solve challenges within chemical, biochemical, technical and medical applications * Helping SMEs and academic research groups to drive ideas from the laboratory to commercial application * Enabling companies from different industries to increase collaboration regarding mutual challenges * Communicating challenges and requirements from industry to academic research groups
