Description: Relevance Feedback Search Engine for PubMed. When a user enters a keyword in the search box, the PubMed search results will be returned. The user then specifies on a sample of results how much they are relevant to what she intends to find, for example, by specifying whether each article is high relevant, somewhat relevant, or not relevant. Once the user clicks Push Feedback button, the system learns a relevance function from the feedback and returns the top articles ranked highly according to the relevance function. The user can repeat the process until she gets satisfying results.
