Proper Citation: rSeqDiff (RRID:SCR_001683)

Description: An R package that can detect differential gene and isoform expressions from RNA-seq data of multiple biological conditions. The approach considers three cases for each gene: 1) no differential expression, 2) differential expression without differential splicing and 3) differential splicing.

Abbreviations: rSeqDiff

Synonyms: rSeqDiff: Detecting differential isoform expression from RNA-Seq data using hierarchical likelihood ratio test
