**Proper Citation:** Trauma Screening Questionnaire (RRID:SCR\_003675)

**Description:** THIS RESOURCE IS NO LONGER IN SERVICE, documented October 12, 2016. A brief self-report trauma screening tool, simple to administer and score, designed for trauma victims in general. This 10-items scale, all derived from the DSM-IV2 criteria, describes either a reexperiencing symptom of post-traumatic stress disorder (items 1 through 5) or an arousal symptom of PTSD (items 6 through 10). The result of the original study indicate that an excellent prediction of a PTSD diagnosis was provided by respondents endorsing at least 6x re-experiencing or arousal symptoms, for each sample of patients (rail crash survivors and crime victims). Scoring: 0-5 yes responses = Likelihood of No PTSD, 6-10 yes responses = likelihood of PTSD

**Abbreviations:** TSQ
