Proper Citation: Karma (RRID:SCR_003732)

Description: An information integration software tool that enables users to integrate data from a variety of data sources including databases, spreadsheets, delimited text files, XML, JSON, KML and Web APIs. Users integrate information by modeling it according to an ontology of their choice using a graphical user interface that automates much of the process. Karma learns to recognize the mapping of data to ontology classes and then uses the ontology to propose a model that ties together these classes. Users then interact with the system to adjust the automatically generated model. During this process, users can transform the data as needed to normalize data expressed in different formats and to restructure it. Once the model is complete, users can publish the integrated data as RDF or store it in a database.

Abbreviations: Karma

Synonyms: Karma A Data Integration Tool, Karma - A Data Integration Tool

Resource Type: software application, software resource, data management software

Defining Citation: [PMID:15215426](#)

Keywords: integration, FASEB list

Funding: Air Force Research Laboratory FA8750-14-C-0240;
