Proper Citation: BEDTools (RRID:SCR_006646)

Description: A powerful toolset for genome arithmetic allowing one to address common genomics tasks such as finding feature overlaps and computing coverage. Bedtools allows one to intersect, merge, count, complement, and shuffle genomic intervals from multiple files in widely-used genomic file formats such as BAM, BED, GFF/GTF, VCF. While each individual tool is designed to do a relatively simple task (e.g., intersect two interval files), quite sophisticated analyses can be conducted by combining multiple bedtools operations on the UNIX command line.

Abbreviations: BEDTools

Synonyms: bedtools - a swiss army knife for genome arithmetic, bedtools: a flexible suite of utilities for comparing genomic features
