Proper Citation: Behavioral Risk Factor Surveillance System (RRID:SCR_012974)

Description: The Behavioral Risk Factor Surveillance System (BRFSS) is a state-based system of health surveys that collects information on health risk behaviors, preventive health practices, and health care access primarily related to chronic disease and injury. For many states, the BRFSS is the only available source of timely, accurate data on health-related behaviors. BRFSS was established in 1984 by the Centers for Disease Control and Prevention (CDC); currently data are collected monthly in all 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and Guam. More than 350,000 adults are interviewed each year, making the BRFSS the largest telephone health survey in the world. States use BRFSS data to identify emerging health problems, establish and track health objectives, and develop and evaluate public health policies and programs. Many states also use BRFSS data to support health-related legislative efforts. Sponsors: This resource is supported by the Center for Disease Control. Keywords: Behavioral, Risk, Factor, Surveillance, System, Health, Disease, Chronic, Injury, Health, Behavior, Health,

Synonyms: BRFSS

Resource Type: research forum portal, disease-related portal, data or information resource, topical portal, portal

Resource Name: Behavioral Risk Factor Surveillance System

Resource ID: SCR_012974

Alternate IDs: nif-0000-30157
