**URL:** <https://github.com/davidemms/OrthoFinder>

**Proper Citation:** OrthoFinder (RRID:SCR\_017118)

**Description:** Software Python application for comparative genomics analysis. Finds orthogroups and orthologs, infers rooted gene trees for all orthogroups and identifies all of gene duplication events in those gene trees, infers rooted species tree for species being analysed and maps gene duplication events from gene trees to branches in species tree, improves orthogroup inference accuracy. Runs set of protein sequence files, one per species, in FASTA format.

**Synonyms:** OrthoFinder2, OrthoFinder
