Description: Rattus norvegicus with name WI;WDB-Sall1^{tm4(tdTomato)}Nips from RGD.

Species: Rattus norvegicus

Notes: Targeting vector was designed to replace 2nd and 3rd exons encoding DNA-binding domain of Sall1 locus with tdTomato. The vector was introduced into WDB/Nips-ES1/Nips (RGD ID:10054010) embryonic stem cells by electroporation. Targeted ES cells were injected into Crlj:WI blastocysts to produce chimeric rats. The chimeric rats were crossed with Crlj:WI rats to produce heterozygous founder rats. These rat strains are being maintained by crossing the founder rats with Crlj:WI rats. Homozygous Sall1 knocked-in rats had the anephric phenotype at E21.5, and died at postnatal Day-1.
