Description: Rattus norvegicus with name WI-Ugt2^{em1}Yakaz from RGD.

Species: Rattus norvegicus

Notes: To produce Ugt2 cluster (?762-kb) KO rats, two gRNAs with target sites upstream of Ugt2a1 and the coding region of Ugt2b31-like were injected into rat fertilized eggs. A knockout strain with Ugt2 cluster mutation carried concatenation of the genomic sequence upstream of Ugt2a1, a 102-bp insertion, and the Ugt2b31-like region. The F2 homozygous rats showed decreased gemfibrozil glucuronidation activity in the liver. The result suggested the functional deletion of rat Ugt2 genes in the Ugt2-KO rats.
