Description: Caenorhabditis elegans with name EMPTY from WB.

Species: Caenorhabditis elegans

Synonyms: EMPTY

Notes: [2025-09-19T16:44:20.274Z WBPaper712] New Strain: Q746 clk-2(C772Y-A828V). Hekimi lab. To identify suppressors of clk-2(qm37) lethality at 25C, we screened ~200 000 haploid genomes in the F2 generation and ~110 000 haploid genomes in the F3 generation, isolating eight suppressor mutations. All eight were kept at 25C, outcrossed with dpy-17(e164) clk-2(qm37) III, and found to be dominant and linked to LGIII. Two mapped to a 0.5 cM interval of LGIII between sma-3 and unc-36 by three-factor mapping, suggesting intragenic suppression. Sequencing of the clk-2 locus confirmed all eight as intragenic suppressors, as well as in the remaining 6 suppressors. All 8 suppressors were found to be intragenic transitions (G A, or C T). Six suppressors caused an A828T substitution, one an A828V substitution, and one a S859N substitution (Fig. 1A).
