Proper Citation: RRID:Addgene_104438

Bacterial Resistance: Spectinomycin

Defining Citation: [PMID:30083222](#)

Vector Backbone Description: Backbone Marker:Lampropoulos et al; Backbone Size:4114; Vector Backbone:pZ001; Vector Types:Bacterial Expression, Plant Expression, CRISPR; Bacterial Resistance:Spectinomycin

Comments: There are two additional BsaI cloning sites in the Cas9 sequences, but they should not affect the cloning process, since GoldenGate cloning can assemble four or more fragments into a backbone. The additional BsaI sites create four overhangs that are very different from the overhangs for integrating the sgRNAs, and there should be no major issues with fragment assembly or cloning efficiency.
