Proper Citation: Donald Danforth Plant Science Center Plant Growth Core Facility (RRID:SCR_024902)

Description: Core offers scientists variety of advanced plant growth spaces and expert horticultural services.This includes Greenhouse Complex,Growth Chamber facility and Headhouse space. Greenhouses are designed for cultivation and containment of research crops, including regulated and protected plant materials.All greenhouses are environmentally controlled for temperature, humidity and light levels, and have automated irrigation and nutrient delivery capability using Argus Control Systems. Many houses have 14 to 20 ft sidewalls for growing taller crops, as well as in-floor heating, height-adjustable light canopies and automated irrigation capabilities. Over 95% of the greenhouse complex utilizes high intensity, energy-efficient horticultural LED lighting. Plant Growth Facility has multiple special-use work spaces including potting areas, seed processing, seed storage coolers, plant dry-down and soil handling rooms, autoclave, fertigation/utility rooms, as well as general storage space.Core is also responsible for managing Seed Storage coolers housing Danforth Center Institutional Seed Collection.
