### Resource Information

**URL:** <http://neuralensemble.org/PyNN/>

**Proper Citation:** PyNN (RRID:SCR\_002715)

**Description:** Software Python package for simulator-independent specification of neuronal network models. In other words, you can write the code for a model once, using the PyNN API, and then run it without modification on any simulator that PyNN supports (currently NEURON, NEST and PCSIM). The API has two parts, a low-level, procedural API (functions `create()`, `connect()`, `set()`, `record()`, `record_v()`), and a high-level, object-oriented API (classes `Population` and `Projection`, which have methods like `set()`, `record()`, `setWeights()`, etc.). The low-level API is good for small networks, and perhaps gives more flexibility. The high-level API is good for hiding the details and the book-keeping, and is intended to have a one-to-one mapping with FacetsML. The other thing that is required to write a model once and run it on multiple simulators is standard cell models. PyNN translates standard cell-model names and parameter names into simulator-specific names, e.g. standard model `IF_curr_alpha` is `iaf_neuron` in NEST and `StandardIF` in NEURON, while `SpikeSourcePoisson` is a `poisson_generator` in NEST and a `NetStim` in NEURON. Only a small number of cell models have been implemented so far.

**Abbreviations:** PyNN

**Resource Type:** software application, software development tool, software resource

**Defining Citation:** [PMID:19194529](#)

**Keywords:** python, software

**Availability:** Free, Available for download, Freely available

**Resource Name:** PyNN

**Resource ID:** SCR\_002715

**Alternate IDs:** nif-0000-23351

**Alternate URLs:** <http://pynn.gforge.inria.fr/>

**License:** CeCILL license

**Record Creation Time:** 20220129T080215+0000

**Record Last Update:** 20260728T043133+0000
