Description: A global health company contributing to the systemic improvement of health care delivery and the health of communities. We are transforming health care by eliminating error, variance and waste for health care providers and consumers around the world. Our solutions optimize processes for health care organizations ranging from single-doctor practices to entire countries, for the pharmaceutical and medical device industries, and for the field of health care as a whole. Our solutions are licensed by more than 9,000 facilities worldwide. We invite you to join us in our quest to make health care become all it should be. Since our company began, we have been committed to transformational change in the vital task of keeping people well. Now more than ever, our focus is on developing the innovations that will help improve the entire health care system. Ultimately, as our CEO Neal Patterson has said, health care is personal. Because in the end, nothing matters more than our health and our families. We''re changing the way people: * Use and share information ** We empower providers to base decisions on best clinical evidence. ** We coordinate care across traditionally fragmented health care systems. ** We provide clinical organizations with the reliability, flexibility and continuous innovation available through cloud-based intelligence. ** We provide contextually relevant information to the right people at the right time. * Pay for health and care ** We believe IT investment must be matched with innovative payment models that are much easier to navigate. ** We are replacing the current, claims-based system with streamlined electronic payments. ** We develop ways to reward people and their providers for proactively achieving positive health goals. * Think about health ** We empower people to actively engage in their health by providing them with a standards-based, lifetime Personal Health Record. ** We are replacing the reactive sick care model with a proactive, personalized plan for health.
