Description: Rattus norvegicus with name PL/let from RGD.

Species: Rattus norvegicus

Notes: A new mutant gene that causes preaxial polydactyl in the hindlimbs was found in the Jcl:Wistar -derived strain of rats with fused pulmonary lobes (FRL) at the Laboratory of Reproductive Toxicology at the Institute of Environmental Toxicology . Genetic analysis has revealed that the new mutation is not closely linked with the fpl gene. This strain was established by sib mating (over 20 generations).
