Description: Rattus norvegicus with name F344-Aspa^{em34Kyo} from RGD.

Species: Rattus norvegicus

Notes: The TALEN genome editing system was used to generate this mutant rat strain. The TALEN system caused a 16-bp deletion in the exon4 of Aspa gene, as a result created a premature stop codon in the gene. Decreased expression levels of Aspa gene and ASPA protein was observed. Histopatologically, this strain shows vacuole formation in the brain and spinal cord. [National BioResource Project for the Rat in Japan](#)
