Description: Rattus norvegicus with name LE-ROSA26^{em1}(CAG-tdTomato)1Sage from RGD.

Species: Rattus norvegicus

Notes: This CRISPR knock in model possesses the fluorophore tdTomato, sitting behind a floxed stop codon in the ROSA26 locus under control of the CAG promoter. By introducing Cre-recombinase through viral transduction or crossing with one of our Cre-driver rats, tdTomato fluorescence will be observed anywhere Cre- is expressed. The tdTomato Reporter rat is useful for applications requiring tissue specific expression, including optogenetics and breeding with Cre-driver lines. ROSA26 is a synonym for rat Thumpd3-as1 (RGD:6491660) and is used as an official symbol for rat strain nomenclature. [Horizon Discovery](#)
