Description: Rattus norvegicus with name LE-ROSA26^{em1}(CAG-tdTomato-NpHR)1Sage from RGD.

Species: Rattus norvegicus

Notes: This CRISPR knock in model possesses the Halorhodopsin fused to TdTomato, sitting behind a floxed stop codon in the ROSA26 locus under the control of the CAG promoter. By introducing Cre-recombinase by crossing with one of our Cre-driver rats, neuronal subtype-specific expression of halorhodopsin and TdTomato will be observed anywhere Cre- is expressed. The Halorhodopsin rat is useful for applications requiring tissue specific expression, including optogenetics and breeding with Cre-driver lines. ROSA26 is a synonym for rat Thumpd3-as1 (RGD:6491660) and is used as an official symbol for rat strain nomenclature. [Horizon Discovery](#)
