**Proper Citation:** RRID:WB-STRAIN:WBStrain00003936

**Description:** Caenorhabditis elegans with name unc-32(e189) glp-1(oz112)/unc-36(e251) glp-1(q175) III. from WB.

**Species:** Caenorhabditis elegans

**Synonyms:** unc-32(e189) glp-1(oz112)/unc-36(e251) glp-1(q175) III.

**Notes:** Heterozygotes are WT and segregate WT and Uncs (both Unc-32 and Unc-36). Tumorous germline phenotype in both hermaphrodites and males; semidominant and temperature sensitive. Even at permissive temperatures (15-20C) brood size is very small (10-20 viable progeny) because of the overproliferation of germ cells at the expense of oogenesis.|"No longer available from the CGC catalogue 24/04/2020"
