Description: Caenorhabditis briggsae with name C. briggsae wild isolate. from WB.

Species: Caenorhabditis briggsae

Synonyms: C. briggsae wild isolate.

Notes: Mixed strain started from many different worms that emerged from the same apricot that gave rise to strain EG4181. Some worms emerged as dauers, but there were also L4s and adults. Consists of a mix of the worms that came from the apricot to try to maintain as much diversity as possible in the population and thus is not a true strain in the traditional sense. It will be sent as contaminated worms since it cannot be cleaned up without going through a bottleneck.|"Non-elegans Strain"
