Vector Backbone Description: Backbone Marker:Invitrogen; Backbone Size:2580; Vector Backbone:pENTR-D-TOPO; Vector Types:PCR cloning vector; Bacterial Resistance:Kanamycin

Comments: The DNA sequences were amplified from pooled wild type TAB zebrafish embryos. There are likely polymorphisms, N454D and D531E, which are not listed in the current ENSEMBL database. This is possibly due to incomplete zebrafish genome annotation, GRCz11. But this will not impact the result of whole-mount in situ hybridization
