Vector Backbone Description: Vector Backbone:pBuild; Vector Types:Synthetic Biology; Bacterial Resistance:Ampicillin

Comments: The most commonly used polynucleotide kinase. Used for: 5' phosphorylation of DNA/RNA for subsequent ligation; end labeling DNA or RNA for probes and DNA sequencing; removal of 3' phosphoryl groups. The plasmids in the Open Enzyme collection contain genetic parts and are not functional by themselves. Researchers can clone these enzymes into an expression vector of their choice and then transform into E. coli bacteria for expression and purification.
