## pEC3079 (p7INT-Pveg\_lacI)

RRID:Addgene\_218505

Type: Plasmid

### Proper Citation

RRID:Addgene\_218505

### Plasmid Information

**URL:** <http://www.addgene.org/218505>

**Proper Citation:** RRID:Addgene\_218505

**Insert Name:** lacI

**Organism:** Escherichia coli

**Bacterial Resistance:** Erythromycin

**Defining Citation:** [PMID:38911550](#)

**Vector Backbone Description:** Vector Backbone:p7INT; Vector Types:Bacterial Expression; Bacterial Resistance:Erythromycin

**Comments:** This plasmid enables the constitutive expression of LacI in *S. pyogenes*. It can be used for inducible gene expression in combination with the Plac promoter variants described in the associated publication. Resource information: The Pveg promoter originates from the *Bacillus subtilis* PY79 genome. The lacI repressor is derived from pPEPY-PF6\_lacI (Plasmid #85589) and originally codon-optimised for *Streptococcus pneumoniae*. However, codon usage is quite similar between *S. pyogenes* and *S. pneumoniae*. p7INT was a gift from Prof. Michael Federle (University of Illinois Chicago, USA). The p7INT plasmid integrates into the 3' end of the tmRNA locus in several *S. pyogenes* strains. It was originally described in: McShan, W.M., McLaughlin, R.E., Nordstrand, A. et al. Vectors containing streptococcal bacteriophage integrases for site-specific gene insertion. *Methods Cell Sci* 20, 51–57 (1998). <https://doi.org/10.1023/A:1009773309163> Please download the file linked below to obtain a well annotated map of the plasmid.

**Plasmid Name:** pEC3079 (p7INT-Pveg\_lacI)

**Record Creation Time:** 20240801T080656+0000

**Record Last Update:** 20260808T083107+0000
