Vector Backbone Description: Vector Backbone:pBCN21-R4R3; Vector Types:Worm Expression; Bacterial Resistance:Chloramphenicol and Ampicillin

Comments: New version of Puromycin resistance vector for drug selection in worms. This vector replaces pBCN22-R4R3 (main advantage of the new vector is compatibility with ccdB Survival cells, and the visual marker that expresses well in non-elegans Caenorhabditis species). This is a Gateway 3-fragment compatible destination vector. It contains AttR4 and AttR3 sites (not AttR1 and AttR2 sites as identified automatically by the Addgene algorithm).
