Vector Backbone Description: Backbone Marker:Hell lab, Addgene plasmid #52675; Vector Backbone:pSIL-EGFP; Vector Types:RNAi; Bacterial Resistance:Ampicillin

Comments: EGFP is a transfection marker, not a fusion. RNAi targeted at 493–511 from the start sequence of rat β -actinin-4 (the sense chain was 5'-gactatccaggagatgcaggtcaagagactgcatctcctggatagtcttttt-3'. The 19-nucleotide sense sequence and the inverted antisense sequence were connected by a 9-nucleotide spacer to allow stem-loop formation. At the 3' end, a penta-thymidine motif provided a polymerase III termination site. siRNAs were cloned into pSilencer™ vector for expression of the respective sequences under the U6 promotor.
