Proper Citation: Edinburgh Postnatal Depression Scale (RRID:SCR_003685)

Description: A 10 item assessment scale developed to identify women who have postpartum depression (PPD). Items of the scale correspond to various clinical depression symptoms, such as guilt feeling, sleep disturbance, low energy, anhedonia, and suicidal ideation. Overall assessment is done by total score, which is determined by adding together the scores for each of the 10 items. Higher scores indicate more depressive symptoms. The EPDS may be used within 8 weeks postpartum and it also can be applied for depression screening during pregnancy. (Adapted from Wikipedia) Scoring: * 0-9 Not Likely to Have Depression * 10-30 Likely to Have Depression

Abbreviations: EPDS

Synonyms: Edinburgh Postnatal Depression Scale (EPDS)
