Proper Citation: GBIF - Global Biodiversity Information Facility (RRID:SCR_005904)

Description: The Global Biodiversity Information Facility (GBIF) was established by governments in 2001 to encourage free and open access to biodiversity data, via the Internet. Through a global network of countries and organizations, GBIF promotes and facilitates the mobilization, access, discovery and use of information about the occurrence of organisms over time and across the planet. GBIF provides three core services and products: # An information infrastructure an Internet-based index of a globally distributed network of interoperable databases that contain primary biodiversity data information on museum specimens, field observations of plants and animals in nature, and results from experiments so that data holders across the world can access and share them # Community-developed tools, standards and protocols the tools data providers need to format and share their data # Capacity-building the training, access to international experts and mentoring programs that national and regional institutions need to become part of a decentralized network of biodiversity information facilities. GBIF and its many partners work to mobilize the data, and to improve search mechanisms, data and metadata standards, web services, and the other components of an Internet-based information infrastructure for biodiversity. GBIF makes available data that are shared by hundreds of data publishers from around the world. These data are shared according to the GBIF Data Use Agreement, which includes the provision that users of any data accessed through or retrieved via the GBIF Portal will always give credit to the original data publishers. * Explore Species: Find data for a species or other group of organisms. Information on species and other groups of plants, animals, fungi and micro-organisms, including species occurrence records, as well as classifications and scientific and common names. * Explore Countries: Find data on the species recorded in a particular country, territory or island. Information on the species recorded in each country, including records shared by publishers from throughout the GBIF network. * Explore Datasets: Find data from a data publisher, dataset or data network. Information on the data publishers, datasets and data networks that share data through GBIF, including summary information on 10028 datasets from 419 data publishers.

Abbreviations: GBIF

Synonyms: GBIF Data Portal, Global Biodiversity Information Facility

Resource Type: data or information resource, data set, organization portal, portal

Keywords: biodiversity, organism, species, country, FASEB list

Availability: Free and open access - users of any data accessed through or retrieved via the GBIF Portal will always give credit to the original data publishers.

Resource Name: GBIF - Global Biodiversity Information Facility

Resource ID: SCR_005904

Alternate IDs: DOI:10.15469, DOI:10.26161, DOI:10.17616/R3J014, DOI:10.15468, DOI:10.35035, nlx_149475, DOI:10.25504/FAIRsharing.zv11j3
