Proper Citation: genomics Workbench (RRID:SCR_013599)

Description: geWorkbench (genomics Workbench) is a Java-based open-source platform for integrated genomics. Using a component architecture it allows individually developed plug-ins to be configured into complex bioinformatic applications. At present there are more than 70 available plug-ins supporting the visualization and analysis of gene expression and sequence data. Example use cases include: * loading data from local or remote data sources. * visualizing gene expression, molecular interaction networks, protein sequence and protein structure data in a variety of ways. * providing access to client- and server-side computational analysis tools such as t-test analysis, hierarchical clustering, self organizing maps, regulatory networks reconstruction, BLAST searches, pattern/motif discovery, etc. * validating computational hypothesis through the integration of gene and pathway annotation information from curated sources as well as through Gene Ontology enrichment analysis. geWorkbench is the Bioinformatics platform of MAGNet, the National Center for the Multi-scale Analysis of Genomic and Cellular Networks (one of the 7 National Centers for Biomedical Computing funded through the NIH Roadmap). Additionally, geWorkbench is supported by caBIG, NCI's cancer Biomedical Informatics Grid initiative.

Synonyms: geWorkbench

Resource Type: data analysis software, data processing software, data visualization software, software application, software resource

Funding: NIH ;
caBIG

Resource Name: genomics Workbench

Resource ID: SCR_013599

Alternate IDs: nif-0000-00306

Record Creation Time: 20220129T080317+0000

Record Last Update: 20260905T132738+0000

Ratings and Alerts

No rating or validation information has been found for genomics Workbench.

No alerts have been found for genomics Workbench.
