Proper Citation: Stark Cross-Sectional Aging (RRID:SCR_014171)

Description: Behavioral and imaging data from about 120 participants aged 18-89. Data were collected as part of a grant to use high-resolution imaging and advanced behavioral tasks to understand how aging affects the hippocampus and how this is related to age-related cognitive decline. The full dataset includes traditional neuropsychological measures, hippocampal-specific behavioral measures, whole-brain DTI, high-resolution DTI of the medial temporal lobes, and structural MRI including segmentation of grey/white/CSF, of cortical regions and of hippocampal subfields.

Resource Type: data or information resource, data set

Keywords: data set, aging, hippocampus, behavioral, dti, mri, image

Funding: NIA R01 AG034613

Availability: Available to the research community
