Proper Citation: rstatix (RRID:SCR_021240)

Description: Software R package for basic statistical tests including t-test, Wilcoxon test, ANOVA, Kruskal-Wallis and correlation analyses. Output of each test is automatically transformed into data frame to facilitate visualization. Additional functions are available for reshaping, reordering, manipulating and visualizing correlation matrix. Functions are also included to facilitate analysis of factorial experiments. Can compute several effect size metrics. Package contains helper functions for identifying univariate and multivariate outliers, assessing normality and homogeneity of variances.

Resource Type: data analytics software, software application, software resource, software toolkit

Keywords: Statistical tests, t-test, Wilcoxon test, ANOVA, Kruskal-Wallis, correlation analyses, R, visualization

Availability: Free, Available for download, Freely available
