Description: Software, written in C and compiled as Python module, for rapidly scanning microarray expression data for Quantitative Trait Loci. Searches for association between each expression trait and all genotypes and evaluates that association by permutation test. Performs bootstrap resampling to estimate confidence region for location of putative QTL.

Resource Type: data analysis software, data processing software, software application, software resource

Keywords: rapidly scanning microarray expression data for QTLs, association between each expression trait and all genotypes, estimate confidence region for location of putative QTL, Quantitative Trait Loci,
