Description: Core offers proteomics, metabolomics, and lipidomics services. Core specialises in working with precious and low-input samples including single-cell proteomics, deep visual proteomics from FFPE tissue, and integrated multiomics from a single sample. Every project is supported from experimental design through to full bioinformatic analysis and biological interpretation. Proteomics: from bulk expression to single-cell and spatial resolution. Metabolomics: precise identification and isotope tracing of metabolic pathways. Lipidomics: high-accuracy profiling of cellular lipid landscapes and signalling. Speciality: Spatial, Single-Cell and Integrated Multiomics: proteins, metabolites and lipids from the same precious sample.
