Description: Rattus norvegicus with name T2DN/Mcwi from RGD.

Species: Rattus norvegicus

Notes: Generated by crossing GK/Swe with female FHH/EurMcwi. During the F1 studies, the GK/Swe started to die out. In order to preserve the GK strain, single male GK was serially crossed to the ongoing GK-FHH cross. This resulted in rapid fixation of the original GK genome except for mitochondrial DNA. In the sixth generation male and female T2DN were intercrossed and strict b x s mating was maintained.
