Description: *Caenorhabditis elegans* with name smc-6(ok3294)/mIn1 [mls14 dpy-10(e128)] II. from WB.

Species: *Caenorhabditis elegans*

Synonyms: smc-6(ok3294)/mIn1 [mls14 dpy-10(e128)] II.

Notes: Homozygous viable mutation balanced by GFP- and dpy-10-marked inversion. Heterozygotes are WT with relatively dim pharyngeal GFP signal, and segregate WT dim GFP, Dpy bright GFP (mIn1 homozygotes), and non-GFP ok3294 homozygotes. Pick WT dim GFP and check for correct segregation of progeny to maintain. ok3294 homozygotes are morphologically wild-type but show ~30% reduction in fertilized eggs and a trans-generational increase in sterility. Maintain under normal conditions. Reference: Bickel JS, et al. PLoS Genet. 2010 Jul 22;6(7):e1001028. | "Made_by: Jeremy Bickel"
